

How to Show Product/Service Item Picture in Quote

To let QwikQuote print picture of the product/service items in a quote row, try the following steps:

1. Enable the layout property to allow print picture in the document type:

2. For each item, enable the Print Picture property.
(This is the default setting when you add a picture to it unless you explicitly disable it.)

3. In the Quote view, you do not see the actual picture. However, it will show up in the preview and PDF file.
(So, we'd like you to use preview to check it before send to your client the final PDF quote document.)

Note: If you use a column to display picture, the picture will be shown in that column
(If most of your product/service items have picture – this is a good choice.)
If not, the picture will be shown in the description column after the description.
(If you only have sporadically items with picture – this is a good choice.)
